Flow Rates

Flow rates up to 200 UKGPM (908 l/min) are available. We offer three sizes of pump for every size of pipe: Options 1, 2 and 3.

7" diameter diaphragm 10" diameter diaphragm 12" diameter diaphragm 7" diameter diaphragm 10" diameter diaphragm All materials of pumps are available in all sizes option of pipe from 1/2" to 3" (see pump selection guide on back page). Pump This allows a 'perfect' pump selection rather than a 'nearest equivalent' and gives you the best UK GPM possible opportunity to keep pump size and 10" diameter diaphragm 10" diameter diaphragm 10" diameter diaphragm 12" diameter diaphragm 14" diameter diaphragm price to a minimum. $^{3}/_{4}$ ", $1^{1}/_{4}$ " and $2^{1}/_{2}$ " 7 1.13 Nm³/mir 40 scfm size pumps available option upon request. All pumps are self priming (up to 3.6m/12ft dry and 8m/26ft wet). Diaphragm pumps operate on a 1:1 ratio basis. The air pressure supplied will equal the 14" diameter diaphragm 10" diameter diaphragm 10" diameter diaphragm 12" diameter diaphragm 14" diameter diaphragm maximum discharge pressure from the pump. 2,83 Nm³/min / 100 scfm 0.57 Nm³/min 20 scfm Work out your total option 'head' and available air (or nitrogen) supply 2.83 Nm³/mir - 100 scfm Pump pressure to see maximum pump performance from the graphs shown here.

Example:

With a suction lift of 2m the pumping capacity is reduced by approximately 10%. Remember to consider friction losses as part of the flow rate calculation.

Flow rate reduction for increased suction lift

Remaining flow rate for viscous fluids

All information relating to pump performance is the result of extensive testing. Flow performance will be reduced with pump upgrades* A and B. Please consult Flotronic for relevant performance figures.

If air consumption is critical please consult with Flotronic Pumps before ordering.

Choose your pump style and material overleaf.
