

PUT YOUR PROCESS FIRST

Many food processors encounter issues with their pumps, and experience maintenance and safety concerns such as:

- Pump cleaning takes too long
- Managers worry about proper pump reassembly and small parts entering the food stream
- Many pumps leak frequently, requiring spill cleanup and replacement of seals
- Some pumps have plastic parts, creating a risk that plastic could enter the food stream

The **Unibloc[®] FoodFirst hygienic pump** solves these problems.

WHY UPGRADE TO A FOODFIRST PUMP

Fast, easy cleaning

Disassembly takes only five minutes versus 20 minutes or more for a competitor's pump. The secret is our proven and patented QuickStrip® design: far fewer parts, quickly disassembled with no tools required. The parts are designed for foolproof, one-way re-assembly.

Works well under pressure

The FoodFirst pump withstands high pressure applications, minimizes deflection and reduces the chances of rotor damage. Say goodbye to costly downtime due to broken parts.

Minimize downtime

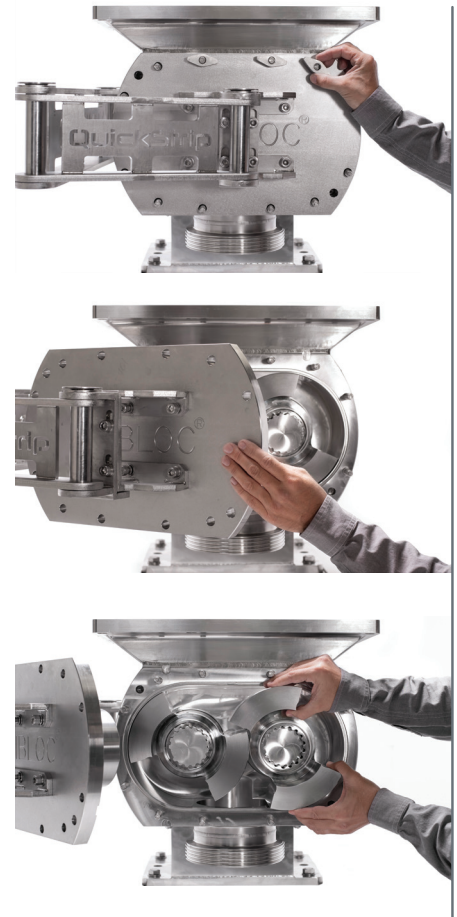

Our rotor bolt free design eliminates a potential point of failure and simplifies strip-down.

Improve food and worker safety

An innovative Safety Swing Arm makes disassembly for cleaning easier and safer than ever. The swing arm supports the cover during sanitation to make it easier for workers to handle. It also helps eliminate bacteria-friendly nicks and crevices created by dropping the front cover on the floor during maintenance cycles. Fewer components and all stainless steel construction ensure the highest level of food safety.

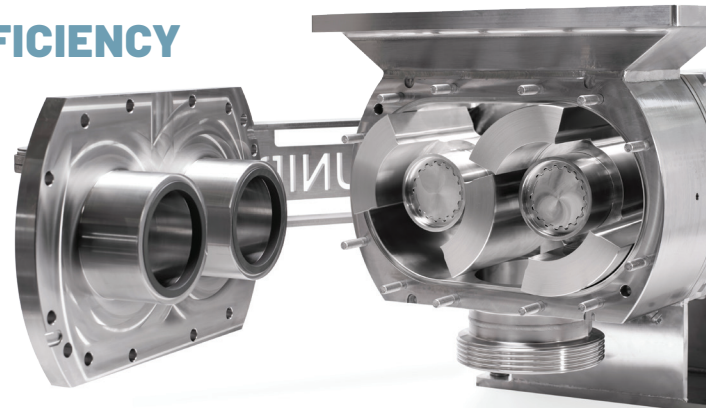

Hygienic design

Crevices throughout the entire pump can harbor bacteria. That's why Unibloc Hygienic Technologies machines pump housings from a solid piece of stainless steel for a smooth surface, eliminating crevices which can harbor bacteria.

STOP ABSORBING THE COST OF INEFFICIENCY

Put pump performance first with Unibloc FoodFirst technology that lowers your annual operating costs. Unibloc pumps are designed for the rigorous food and protein industry which requires manual cleaning of pumps. Our pumps quickly pay for themselves through lower maintenance costs and increased efficiency. It's simple for customers already using Unibloc pumps to upgrade to a FoodFirst design. Ask us about our FoodFirst upgrade program.
