UNIBLOC®

Unibloc® QuickStrip® FoodFirst series pumps are the first of their kind designed to save labor, minimize foreign material risk, and maximize food and worker safety—top priorities among food and beverage processing professionals. The QuickStrip design features fast, tool-free disassembly and fewer parts. Crews can clean a pump in 20 minutes while cleaning other pumps takes up to two hours. What's more, because workers don't need tools, they won't scratch the pump during cleaning. Scratches can harbor bacteria and be a source of contamination. The all-stainless-steel pumps have no plastics, no o-rings, and no rotor bolts that could end up in the process stream. The unique FoodFirst design eliminates foreign materials at their source and ensures maximum metal and x-ray detectability. The innovative Safety Swing Arm makes disassembly easy. The swing arm supports the heavy cover during cleaning, improving worker safety and efficiency.
